

Employee Benefits Technology

INNOVATION AND IMPLEMENTATION

At PES, we understand the value of implementing simple, effective technology solutions in the employee benefits experience. That's why we've worked hard to develop a growing, expert, in-house Data & Technology team.

Our Data & Technology team is a critical part of our process which allows us to offer our clients a first-class employee benefits experience. Behind the scenes, our team gathers vital data, builds out our technology solutions, tests the platforms to ensure efficacy, liaises with carriers, and delivers final reporting to our carrier, broker and employer partners for billing and coverage.

WHAT WE DO

CUSTOM TECHNOLOGY BUILDS

Our technology solutions simplify the employee benefits experience by offering an intuitive benefits shopping and enrollment environment with mobile-friendly options.

RIGOROUS PLATFORM TESTING

Our team thoroughly tests every technology build, providing assurance to our clients that their employees will be able to easily and effectively enroll in their benefits online 24/7 and have uninterrupted access to important benefits information.

DATA REPORTING

Our team compiles reports which include elections, premium numbers, deductions and more, giving our clients insight into the success of their enrollment and ensuring carriers have the correct election information.

DID YOU KNOW?

While our preferred technology platforms are Ease, Employee Navigator, bswift and PlanSource, PES is platform agnostic, meaning we can build on many benefits administration platforms.

ASSISTANCE WHEN YOU NEED IT

PES offers a direct point of service contact model, which means that when you have questions, you have direct contact with one of our expert data and technology team members.
