

Powering Workforce Wellness.

Wellness Portal

Quickly access all health and wellness programs and tools through MediKeeper's Wellness Portal.

How It Works

Member participation and engagement is made simple and easy with our Wellness Portal. The highly configurable platform is a white-labeled solution that integrates with various third-party vendors to allow members a single place to review all health, wellness and benefits programming.

Members can easily complete their Health Risk Assessment to identify and understand their risk for up to 16 diseases and conditions, as well as review action items to improve their health and guide behavioral changes. Additionally, the Portal's dashboard provides multiple wellness tools and experiences, including fitness tracking, wellness challenges, incentives and rewards, health coaching, social circles, and more.

Each activated Wellness Portal contains targeted content and delivery to provide each member a meaningful experience. From interactive health learning to connection on social walls with others within the community, all activity is supported by the intuitive interface and customizable for individual use.

Administrator Capabilities

The Wellness Portal is the central hub for all areas of program creation, communication, and reporting. MediKeeper's N-tier hierarchy accommodates any client group's structure, allowing it to be configured and curated as desired. With less than two days needed for deployment, administrators can experience the programming benefits almost instantly.

Program Creation. Create templated and branded content, as well as build customized incentives and rewards programs, community challenges, and social circles to encourage participation.

Targeted Communication. Communication capabilities include targeted, HIPAA-compliant messages and notifications sent directly to specific subsets of the chosen member population to elicit action, share announcements, or simply serve as reminders.

Comprehensive Reporting. View detailed reporting on health and wellness habits and outcomes with real-time, HIPAA-compliant reports available through the online dashboard. Insights are collected from health risk assessment results, biometric screening information, claims data and more to optimize future opportunities.
