

Health Security

Protecting your business in the post-pandemic era

As COVID-19 began to spread to the United States, Sharecare has been rapidly mobilizing our platform with our partners, public health experts and healthcare institutions to provide our customers with the critical capabilities needed across our existing platform to help your employees return to the workplace safely while continuing to support their health and well-being. Building on our deep expertise in handling mass health data, Sharecare developed critical capabilities to help organizations mitigate the operational and health safety challenges introduced by the pandemic, while restoring confidence among people that their surroundings are safe. Sharecare has a unique vantage point as we have built the framework, resources and infrastructure to be able to support such a massive shift in our community.

Not unlike the hefty investments that your IT departments make in cybersecurity to protect your business from viruses - \$123 billion spent in the U.S. in 2020 alone - our new normal requires that we also protect our infrastructures from viruses of the epidemiological variety.

Health Security

Facility, Employee & Customer Readiness

Going far beyond basic facility standards and establishing a consistent global baseline for health security, Sharecare's proprietary platform helps unify and verify the different health safety and security protocols to ensure a safe and secure location for employees, guests, and customers. This confidence-restoring verification is signified by an easily identifiable seal of approval - the Sharecare Health Security VERIFIED badge - for venues to display onsite or on their website.

How it works

Verify. Certify. Screen. Scan

Once your facility and staff become verified, you will receive a VERIFIED® badge to give your clients, guests and customers confidence that you are actively taking the right steps to ensure their health and safety.

Verified locations

“The services by Sharecare will be an important way to dynamically amplify the existing health safety protocols in place at hotels, as well as give travelers a recognizable certification that assures them that a hotel or resort is health security verified.”

J.D. O'Hara
CEO
InterNova Travel Group

Health Security

Digital Vaccine Assistant

On the backbone of our health security platform, Sharecare has built a comprehensive package to support vaccine adherence on behalf of state and local governments that includes engaging, relevant content about the vaccine, health security verification for testing sites, a digital vaccine assistant, and robust analytics/reporting built to scale.

Through this offering, Sharecare is uniquely and immediately positioned to provide people with easy access to vaccine information and registration through text message, toll-free call center, website, downloadable web-app, and QR code.

Following vaccination, Sharecare provides individuals with access to a simple and secure digital vaccine record, reminders for their second dose, and ongoing, up-to-date vaccine information. This tech-enabled approach will increase awareness and demand for the vaccine, provide consumers with a digital vaccination record for easy reference and safe-keeping, and support states as they safely reopen communities.

How it works

Schedule. Register. Scan. Track. Remind.

Why Sharecare

Scalable end-to-end vaccine distribution

- **Timesaving:** 33% reduction in time study completed in Florida in digital process vs non-digital process
- **Information accuracy:** Robust analytics to provide you with the ability to react to your community
- **Integration:** Interface with third party systems to share vaccination record information; provide extracts to third party for billing processing
- **Post-vaccine connectivity:** Ability to stay engaged with your residents receiving the vaccine after the first dose to ensure adherence
- **Scalable:** Immediate ability to setup any sites within 48 hours after initial integration
- **Safe and secure:** Contactless experience for residents and site staffers

Health Security Well-Being@Work

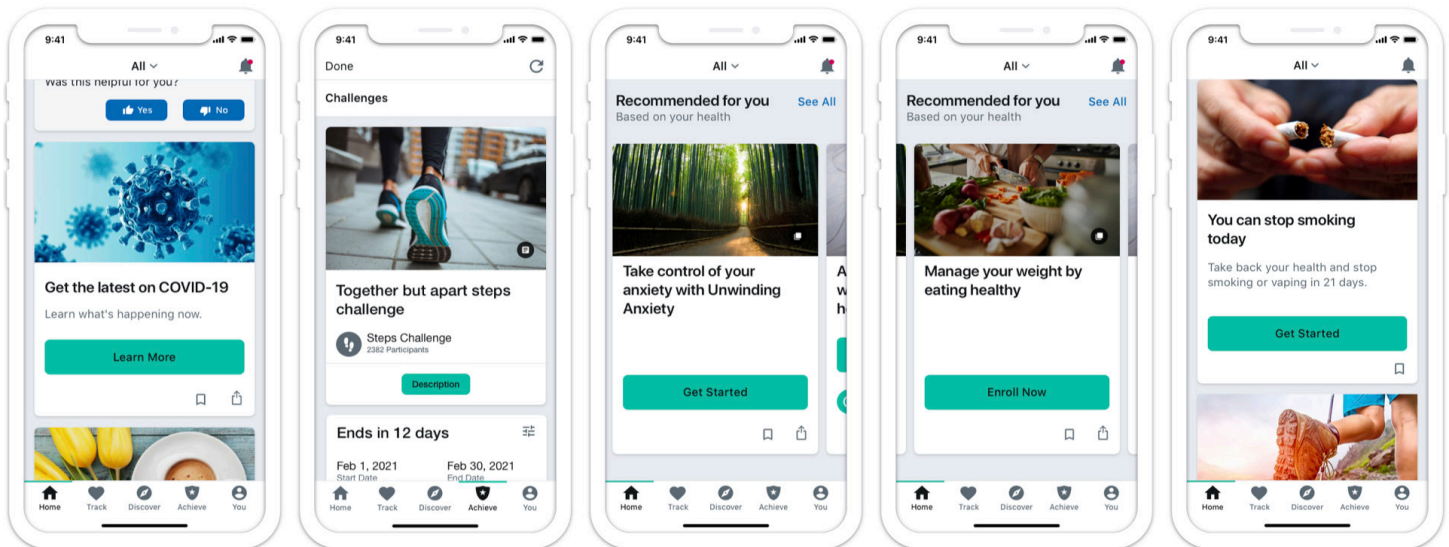

In this new post-pandemic era, companies have to focus on the immediate needs of COVID-19 management while not losing site of the importance of well-being with the goal of building resilience and fostering longevity.

Sharecare has a unique vantage point as we have built the framework, resources and infrastructure to be able to support such a massive shift in our community. In addition to the comprehensive capabilities we offer today, Sharecare has been rapidly mobilizing our platform with our partners, public health experts and healthcare institutions to provide our customers with the critical capabilities needed across our existing platform to help your employees return to the workplace safely while continuing to support their health and wellbeing.

Our rationale is that a successful return-to-work strategy requires more than a one-size-fits-all solution that is narrowly focused on a particular testing protocol. Sharecare's digital solution addresses the emotional, educational, clinical, and operational challenges that this pandemic has introduced that is adaptable to evolving regulatory and clinical guidance, and product innovation.

How it works Integrated products to help employees cope with COVID-19

Stay up-to-date

The latest news and information on COVID-19, vaccines, and more about healthy living with personalized recommendations.

Health challenges:

Targeted health-related challenges to reduce stress and stay resilient to help your population stay in shape in case they get sick.
