

CIRRUS MD

OVERVIEW

Physician-first Care & Guidance

For Employers, Brokers & Consultants

ABOUT

CirrusMD has established a new category of care delivery called Physician-first Care & Guidance, improving access and speed to care for patients, reducing time and information barriers for physicians, and bringing patient data directly into the care encounter. We believe that when we provide immediate, affordable care at scale with expert guidance and full transparency, we drive the change needed to improve health and lower cost across an entire population.

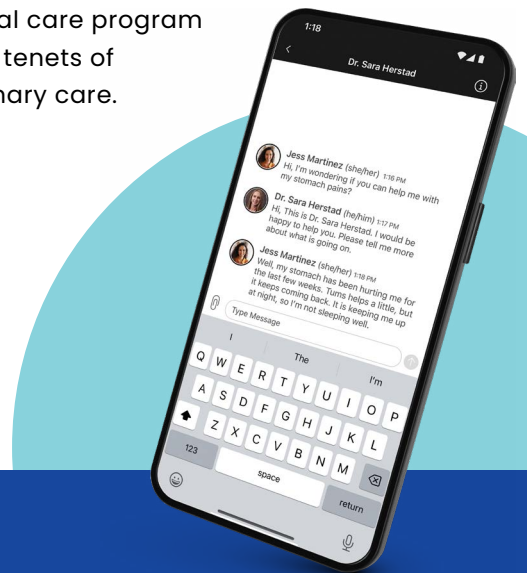

WHERE THE MOMENT OF NEED MEETS THE POINT OF CARE

Physician-first Care & Guidance provides employees with always-on access to a doctor who begins delivering care in less than a minute. An easy chat-first interface ensures employees can reach a doctor anytime, 24/7, wherever they may be.

CirrusMD doctors deliver whole-person primary, chronic, preventative and urgent / acute care, based on each patient's needs. Our multidisciplinary clinical team is armed with real-time access to employer benefits for easy referrals to in-network resources, as well as cost and quality tools, for informed guidance that happens seamlessly at the point of care, when the employee needs it most.

THE NEW PATH TO COST EFFECTIVE CARE AT SCALE

Vast experiences in primary care and family practice medicine, and chronic condition management, have paved the way to develop a complete virtual care program founded in the tenets of advanced primary care.

WITH PHYSICIAN-FIRST CARE & GUIDANCE:

Care is delivered on the patient's terms – when, where, and how they want to engage.

Barriers to care are eliminated, including time, distance, technology, and intermediaries, so patients connect directly and immediately.

Health and benefits data are inserted directly into the patient-physician conversation through an automated workflow.

All in-network referrals are delivered by doctors through a lens of data-driven cost and quality.

The complete care team includes health coaches who help break down barriers, close the care loop, and improve care plan adherence.

By placing the physician first and giving them the tools and information they need, the entire care journey is changed – delivering a more streamlined, less fragmented, better care experience for everyone.

ADVANCED TECHNOLOGY SUPPORTS SCALABLE, PHYSICIAN-FIRST CARE

Clinical intelligence tools and workflow automation place real-time resources in the hands of trusted physicians, enhancing the patient care journey from the first step:

- Leveraging a vast data set of complete, accurate physician-patient encounters for AI/ML-enabled intelligence.
- Integrating two way patient data for whole-person longitudinal care.
- Bringing health risks and inferences, cost and quality data, and patient-specific benefits and resources directly into the physician's workflow.

With advanced technology, integrated data, and clinical intelligence delivering patient information to physicians in real time, CirrusMD creates care experiences unlike any other.

Physician-first Care & Guidance is the best first step in any care journey. Learn about our actuarially-proven ROI model and let us demonstrate the savings available to your organization.
